

"The New Global Awareness".

Article 1: The New Global Awareness and "Science"

Welcome to the first article of this three part series of weekly articles, published on Tuesdays, explaining what "The New Global Awareness" is.

As the name implies "The New Global Awareness" is about a new *"awareness"*, one that will have a major impact on our global society.

What is so important about this new awareness is that it looks at humanity and our reality from a holistic point of view, meaning that it involves almost every aspect of our human lives from science to metaphysics to politics and so on. It also looks at spirituality, but purely from a scientific and factual point of view.

In this short series of articles we shall limit our focus to only include three topic areas:

- Article 1: The New Global Awareness and Science (i.e. This article)
- Article 2: The New Global Awareness and Spirituality
- Article 3: The New Global Awareness and Politics.

I can understand that some of you who are reading this may be wondering what these three subjects have to do with one another. Well, the reason why we look at Science is because there is a major flaw in our scientifically based perception of reality. One which we need to become aware of and if genuinely understood will change the way we view our reality.

In article two we then make use of that new awareness to demystify spirituality and to open the door for spirituality to become part of science - or rather, for spirituality, our religions and belief systems and our sciences combined to merge into one, so as to unify humanity in a universal awareness and knowledge about life and our true reality.

In article three "Politics", we first look at how this universal awareness and knowledge can also help remove the "Power" from those who misuse Religion for personal gain and/or agendas. And then we look at some of the things that are wrong with our current political and economical systems - while also introducing a new model for a future system capable of dealing with all of our current major problems.

Okay, so what exactly are we talking about here? What is it that we are not aware of?

Simply put, the new awareness and the in-depth enhanced understanding it provides, changes the way we view our lives and our physical reality. It presents us with a range of new insights that will help answer many of the biggest and most difficult questions ever asked by humanity, including those asked by philosophers, theologians, astronomers, quantum physicists and so on.

While no series of short articles like these can ever substitute the many insights and progressive buildup of awareness and understanding found in the book "The New Global Awareness" (which holds the answers to everything we cover in these articles) - we can here at least attain a general idea of what this new awareness can help us with

in regards to science, by opening our awareness to what is the factual reality of our physical reality.

As we may all have heard, the generally accepted view, or perception, we have of our reality is that we live in a physical reality referred to as a "time and space" reality.

In our perception of reality, basically all that is required for us to perceive it as real, is that it adheres to the laws of physics - which in turn depends on the dimension of both "time" and "space" for it to be detectable and measurable in one way or another. In other words, our perception of what is real is ultimately totally dependent on the element of both time and of space, without which there would be no reality for us to perceive.

But should not the simplicity of a reality, really only built on the foundation of time and space for us to perceive it as real, tell us that something must be missing?

Since this article is about science, let us assess our reality purely and strictly from a scientific and logical point of view.

Yes, we do live in an expanding universe where everything is separated by "space", which in turn allows us to perceive it as a three dimensional physical reality (which would not have been possible had everything been located in just one single spot). But where exactly is this expanding universe of ours located?

**We live on a little
BLUE PLANET
Located in the
Universe**

**But where is
the location of the
Universe?
“WHERE ARE WE?”**

The same can basically be said about "time". If we did not have the dimension of time (which after all is a factual and scientifically recognized concept), everything would just be standing still, as if it was frozen. In other words, it is only by actually having a time-line in our three dimensional reality, that different things can happen at different times and therefore allow our physical reality to become alive. But where exactly on the time-line are we right now?

Does not the fact that our expanding universe exists in the middle of "nowhere" and that our current moment to be alive exist on a time-line which has no beginning and no end, tell us that something is missing from our otherwise perfect and untainted scientific view and perception of our reality?

I know that many will say that "*...That is just how it is, there is nothing strange about that*". But really (and scientifically) - does not the fact that our physical reality (which is totally dependent on and defined by, the laws of physics and the dimension of both "time" and "space" for it to be detectable and measurable) exist in a universe which does not itself adhere to the laws of physics, tell us that there is something missing in our current understanding and awareness of the reality in which we live - a "blind spot" so to say in our awareness and perception?

The fact is that something that has no specific "point in time" and which is endless in size simply does not fit in with our laws of physics and therefore does not meet the criteria needed to be a part of our physical reality.

Putting our head in the sand and saying "*...nothing strange going on here!*" can hardly be considered a scientific approach to the problem. What we need to ask ourselves from a genuine scientific point of view is: How can two seemingly incompatible realities coexist in one and the same reality? In other words, does not the fact that our perception of reality, which actually is based on the elusive dimension of "time" and "space" which itself does not adhere to the laws of our physical reality and which effectively places our physical reality in what best can be described as a non-physical reality, tell us that something is missing in our awareness of what actually is going on?

And perhaps even more importantly - what does this "blind spot" or lack of understanding mean for our general understanding of reality; for the sciences we have built on the foundation of this limited understanding and for our ability to fully progress in the different disciplines of science?

As mentioned earlier, answers to everything we cover in these articles can be found in the book "The New Global Awareness". But while we cannot go much deeper into explaining the topic of our reality here, what we can do here is to mention some of the many scientific disciplines that will benefit from the better understanding and awareness our reality revealed in the book:

Quantum Physics:

It provides an in-depth explanation of our true reality and explains the mystifying quantum-puzzling link between the object and the observer.

Neuroscience:

It gives factual evidence of the self i.e. the invisible or non-observable part of the equation of what it means to be alive. (*N.B. More to be revealed on this topic in article two*).

General Science:

It defines the parameters of how far traditional science can go in explaining our physical reality and why. It then takes us way beyond the limitations of traditional science, using a scientific and logically sound approach to provide factual evidence of our extended true reality.

Modern Medicine:

It explains the mechanics of self healing and the underlying reasons for how and why it works.

Astronomy:

It explains our universe, defines its boundaries and gives us a whole new perception and way of understanding the concept of space.

Next Tuesday...

In our next article entitled "Spirituality", we shall again make use of scientific facts and logic, but this time to demystify spirituality. Please note that while religion usually is based on spirituality, we shall not be talking about religion or beliefs in any of these articles. And in our third and final article we shall be looking at a very current and hot topic "Politics".

--

I would like to invite anyone with an interest in "The New Global Awareness" to join the LinkedIn Group also named "The New Global Awareness".

Link: <https://www.linkedin.com/groups/7062924>

More information.

For those of you who are interested in new material for News articles, Blogs or for topics to write about in Journals etc, as you may well have discovered "The New Global Awareness" provides a wealth of new topics and insights to use. If you have any further questions please feel free to contact me on any of the social media platforms, either by posting in one of the "The New Global Awareness" Groups or by sending me a private message.

It is anticipated that as this new global "awareness" starts to grow and become commonly known and understood, it will also increasingly become a subject matter for anyone to participate in whether they have read the book or not, for example on social media etc. (In light of this and for optimal participation in future discussions regarding "The New Global Awareness" I would recommend you consider reading the book.

"The New Global Awareness" is ideal for discussions and debates at all levels of our society and for inclusion in the curriculum from elementary/primary school through to university level.

Direct link to the book on Amazon: <https://www.amazon.com/dp/B01M61YNXA>

N.B. The book is available in both e-book and paperback format.

For book details and additional information about "The New Global Awareness" please visit the "The New Global Awareness" website:
